

OptiTimal

Zeyuan Hu

Goal

To create an android application that allows users to record and analyze time spent doing different activities

Features

- User input
 - Database storage
 - Two graphical views of time allocation
 - Default settings options
-

User Feedback

"I like how clean and simple it is to use"

*"It's cool to see my time distribution graphically,
both in breakdown of time and change in
patterns"*

- Rebekah Winiarski

User Feedback, cont.

"I really like this app! It helps me to keep track of what I do everyday. Most importantly, given the analysis from the graph, I can optimize my time spending on different things and organize my college time better"

-Zeyuan's roommate

Challenges

- New to Android Development
 - Learning about databases
 - Version control
 - Accessing phone data
 - Incorporating ideal features into user-friendly views
-

Rewards

- Experience in Android Development
 - Learned about databases
 - GUI design experience
 - Understanding difficulty of creating feature-rich, user-friendly, bug-free applications
 - Our own experience in time management!
-
